Blind Coding

It will be an event related to coding a simple program but the twist is participants have to off their screens and code without looking at the screen and only using keyboard they have to write the exact code and make it run effectively. (we can have time interval for not using the monitor to make it little easy and we will also provide them some time for error solving.)

If the code runs means the participant is accurate and will be the consider as winner.

To short list we will set a time limit and the one whose code runs perfectly in the given time limit will grab the winner tag.

We can make it more interesting with 2-3 rounds.

First round will be of a questionnaire where we will arrange a google question paper so that we can short list the candidates.

Second round will be of coding normally with screen open but under the given time period.

And the third round will be blind coding.

Vision
To explore the beauty of coding and to understand the importance of accuracy and time management.

Venue
Any computer lab.

Budget
If everyone support we only need money for printing the posters .

No cost is required for labs and manpower.

People needed
One person to create the google form for the participants

All team members can contribute for the publicity of the event.

A team to decide questionnaire and the programs for coding.

A team to manage the events sequence.

Publicity
Everyone could help by putting status of the event.

Posters will help offline and online too.
